

# ENVIRONMENTAL LEAD NEWSLETTER

September 2000

## UPDATES AND ANNOUNCEMENTS

**The Environmental Lead Program is now administering the 3<sup>rd</sup> party examination required for certification:**

Individuals who feel that they qualify for certification must first apply directly to the Department for Public Health, Environmental Lead Program at (502) 564-4537 extension # 3704. The application, and information concerning training courses, experience and or education requirement will be reviewed. If approved a date and location would be set for the individual to take the required 3<sup>rd</sup> party examination.

### Loss of Certification:

The following individuals or companies have been removed from the listing of certified individuals since they have not renewed their certification as of September 30th.

#### Inspectors:

Todd Curtis

40-005

-continued on Page 2-

## Common Issues

### SAMPLINE TECHNICIAN and New Course

NEW Housing And Urban Development (HUD) RULES effective in September indicate in Section 35.1340 that clearance is to be conducted after interim controls, paint stabilization, standard treatments, ongoing lead-based paint maintenance, or rehabilitation activities. In addition to certified inspectors and risk assessors, HUD rule indicates the potential use of a "Clearance Technician" or a discipline of similar purpose.

To assist HUD in providing appropriate training for this individual the Environmental Protection Agency (EPA) has prepared a "Sampling Technician" course curriculum for individuals to receive appropriate training. It is believed that EPA wanted to avoid using the term "Clearance Technician" since clearance is also required after lead-paint abatement activities.

As in many other states, Kentucky rules do not allow for most of the assessment and sampling activities that HUD indicates that a clearance technician can do. Also the EPA Sampling Technician course manual indicates, that other assessment activities may be conducted by these technicians, which also is in conflict with Kentucky law and regulations.

Therefore please note the following:

- **"Post Abatement Clearance testing"** as identified in 40 CFR part 745.223 definitions is considered as an abatement activity and is regulated under Kentucky rules.
- **"Clearance testing"** after such activities as interim controls, the Department does not regulate paint stabilization, maintenance, rehabilitation and remodeling activities for the purpose of determining if adequate cleanup has occurred. **This sampling only includes dust wipe collection in work areas only.**
- Samples collected in other rooms, which were not a part of the work area that are taken for the purpose of assessing lead hazards would be a regulated activity and require a certified risk assessor.

## Updates and Announcements –continued- Loss of Certification

### Companies:

AEGIS Environmental 45-00

**The following individuals certification will expire in the following three (3) months:**

### Inspectors:

Tim Kerly	10/00
Arnold Long	10/00
Tommy Taylor	11/00
Marcus Iwankiw	12/00
Clevon Jackson	12/00

### Risk Assessors:

Ted Audus	10/00
Brian Bottom	11/00

Continued from Page 1

### SAMPLINE TECHNICAN and New Course

- **All lead hazard assessments, which may also include sampling of paint, soil, and dust are Kentucky regulated activities.** The law states that beginning July 1, 1997, all persons who perform or offer to perform lead-hazard detection or lead-hazard abatement services in target housing or child-occupied facilities shall be certified. Lead-hazard detection is defined by law as an inspection or risk assessment conducted to determine the existence, nature, severity, and location of lead hazards.
- According to HUD rules as indicated in 24 CFR 35.1340 (1) (iii), unless these individuals are certified they will have to have their work approved by certified inspector or risk assessor. **At this time there are no established procedures or standards for certifying these individuals, they will have to work under a certified inspector or risk assessor.**

## Supervisor/Project Designer/Company Issues

A project designer must be involved in the abatement plan if the project has more than nine residential units. An abatement plan is who, what, when and where the activities occur. The following are key components to an abatement plan.

- Name and certification number of the individual who prepared the plan
- Name and certification numbers of all individuals working at the site
- Planned daily work hours
- Copy of project specifications relating to abatement project
- Location of abatement site (street address)
- Type of structure (i.e. brick, wood – one, two story, etc.)
- Anticipated start and finish dates
- Sequence of work activity (i.e. flow or work, steps, plan of removal or replacement in chronological order)
- Abatement methods to be used (including location of plastic sheeting, etc.)
- Enclosure and containment locations.
- Locations of rooms and components where abatement will occur (including floor plans, sketches, etc.)
- The reason for the selection of particular abatement methods for each component.
- If encapsulants are used, provide product usage information, etc.
- Cleanup measures to be used
- Name and address of individual conducting clearance testing
- If clearance individual is an employee of the Abatement Company, include the name laboratory to be used to conduct analysis of dust wipe samples, etc.

An **occupant protection plan** is also required and is a written description of the measures and management procedures that will be taken during the abatement to protect the occupants of the building from exposure to lead hazards.

## Certification Listing

### Lead-Hazard Risk Assessors

George D. Adams Exp. 10/1/01  
9305 Bova Court  
Louisville KY 40291-1486

Ted M. Audus Exp. 10/29/00

### Training Provider Issues

Please be advised that this agency is now giving the required EPA 3<sup>rd</sup> party examinations. Please discontinue providing any forms or information that you have been providing to your students in this regard. The 3<sup>rd</sup> party tests have been revised and a new study guide is now available to assist students in the preparation for this test. The front of the booklet states "Training and Study Guide Revision 2." Please provide copies of this guide to your students.

The students will need to contact this agency to set up appointments to take the test. As in the past they will need to provide a copy of their course completion certificate and show photo identification. All of the tests have one hundred (100) questions except the risk assessor test; which has one hundred and ten (110). In addition we will be adding ten (10) questions that relate to our law and regulations. These ten (10) questions will not count toward the pass or fail level of seventy (70) percent; but will be used to determine additional training needs or information provided to the students.

Also be advised that there are several questions that relate to OSHA rules on the Supervisor 3<sup>rd</sup> party examination. For those training providers who only use the EPA curriculum four (4) course and must comply with the course curriculum requirements, it will be difficult to provide enough discussion of applicable OSHA rules. EPA rules do not dictate the amount and manner of OSHA training. However, OSHA hands-on activities are not allowed. As in the case of Kentucky rules, EPA indicates the inclusion of all federal, state, and local regulations that pertain to lead hazards, lead assessment and lead hazard abatement. The training and study guide indicates what study topics of OSHA are represented on the test. At minimum handouts should be provided to the students that cover these topics for test review and future on-job situations.
